

DRAFT

# Grade 4 Mathematics Item Specifications

---

The draft Florida Standards Assessments (FSA) *Test Item Specifications (Specifications)* are based upon the Florida Standards and the Florida Course Descriptions as provided in [CPALMs](#). The *Specifications* are a resource that defines the content and format of the test and test items for item writers and reviewers. Each grade-level and course *Specifications* document indicates the alignment of items with the Florida Standards. It also serves to provide all stakeholders with information about the scope and function of the FSA.

### Item Specifications Definitions

**Also assesses** refers to standard(s) closely related to the primary standard statement.

**Clarification statements** explain what students are expected to do when responding to the question.

**Assessment limits** define the range of content knowledge and degree of difficulty that should be assessed in the assessment items for the standard.

**Item types** describe the characteristics of the question.

**Context** defines types of stimulus materials that can be used in the assessment items.

- **Context - Allowable** refers to items that may but are not required to have context.
- **Context - No context** refers to items that should not have context.
- **Context - Required** refers to items that must have context.

# Technology-Enhanced Item Descriptions:

The Florida Standards Assessments (FSA) are composed of test items that include traditional multiple-choice items, items that require the student to type or write a response, and technology-enhanced items (TEI). Technology-enhanced items are computer-delivered items that require the student to interact with test content to select, construct, and/or support their answers.

Currently, there are nine types of TEIs that may appear on computer-based assessments for FSA Mathematics. For students with an IEP or 504 plan that specifies a paper-based accommodation, TEIs will be modified or replaced with test items that can be scanned and scored electronically.

Any of the item types may be combined into a single item with multiple parts called a multi-interaction item. The student will interact with different item types within a single item. Each part could be a different item type. For paper-based assessments, this item type may be replaced with a modified version of the item that can be scanned and scored electronically, or replaced with another item type that assesses the same standard and can be scanned and scored electronically.

For samples of each of the item types described below, see the [FSA Practice Tests](#).

## **Technology-Enhanced Item Types – Mathematics**

1. **Editing Task Choice** – The student clicks a highlighted word, phrase, or blank, which reveals a drop-down menu containing options for correcting an error as well as the highlighted word or phrase as it is shown in the sentence to indicate that no correction is needed. The student then selects the correct word or phrase from the drop-down menu. For paper-based assessments, the item is modified so that it can be scanned and scored electronically. The student fills in a circle to indicate the correct word or phrase.
2. **Editing Task** – The student clicks on a highlighted word or phrase that may be incorrect, which reveals a text box. The directions in the text box direct the student to replace the highlighted word or phrase with the correct word or phrase. For paper-based assessments, this item type may be replaced with another item type that assesses the same standard and can be scanned and scored electronically.
3. **Hot Text** –
  - a. **Selectable Hot Text** – Excerpted sentences from the text are presented in this item type. When the student hovers over certain words, phrases, or sentences, the options highlight. This indicates that the text is selectable (“hot”). The student can then click

on an option to select it. For paper-based assessments, a “selectable” hot text item is modified so that it can be scanned and scored electronically. In this version, the student fills in a circle to indicate a selection.

- b. Drag-and-Drop Hot Text** – Certain numbers, words, phrases, or sentences may be designated “draggable” in this item type. When the student hovers over these areas, the text highlights. The student can then click on the option, hold down the mouse button, and drag it to a graphic or other format. For paper-based assessments, drag-and-drop hot text items will be replaced with another item type that assesses the same standard and can be scanned and scored electronically.
- 4. Open Response** – The student uses the keyboard to enter a response into a text field. These items can usually be answered in a sentence or two. For paper-based assessments, this item type may be replaced with another item type that assesses the same standard and can be scanned and scored electronically.
- 5. Multiselect** – The student is directed to select all of the correct answers from among a number of options. These items are different from Multiple Choice items, which allow the student to select only one correct answer. These items appear in the online and paper-based assessments.
- 6. Graphic Response Item Display (GRID)** – The student selects numbers, words, phrases, or images and uses the drag-and-drop feature to place them into a graphic. This item type may also require the student to use the point, line, or arrow tools to create a response on a graph. For paper-based assessments, this item type may be replaced with another item type that assesses the same standard and can be scanned and scored electronically.
- 7. Equation Editor** – The student is presented with a toolbar that includes a variety of mathematical symbols that can be used to create a response. Responses may be in the form of a number, variable, expression, or equation, as appropriate to the test item. For paper-based assessments, this item type may be replaced with a modified version of the item that can be scanned and scored electronically or replaced with another item type that assesses the same standard and can be scanned and scored electronically.
- 8. Matching Item** – The student checks a box to indicate if information from a column header matches information from a row. For paper-based assessments, this item type may be replaced with another item type that assesses the same standard and can be scanned and scored electronically.
- 9. Table Item** – The student types numeric values into a given table. The student may complete the entire table or portions of the table depending on what is being asked. For paper-based assessments, this item type may be replaced with another item type that assesses the same standard and can be scanned and scored electronically.

# Mathematical Practices:

The Mathematical Practices are a part of each course description for Grades 3-8, Algebra 1, and Geometry. These practices are an important part of the curriculum. The Mathematical Practices will be assessed throughout.

## **Make sense of problems and persevere in solving them.**

MAFS.K12.MP.1.1:

Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, “Does this make sense?” They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.

## **Reason abstractly and quantitatively.**

MAFS.K12.MP.2.1:

Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to decontextualize—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to contextualize, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.

**Construct viable arguments and critique the reasoning of others.**

MAFS.K12.MP.3.1:

Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.

**Model with mathematics.**

MAFS.K12.MP.4.1:

Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

**Use appropriate tools strategically.**

[MAFS.K12.MP.5.1:](#)

Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.

[MAFS.K12.MP.6.1:](#)

**Attend to precision.**

Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.

**Look for and make use of structure.**

MAFS.K12.MP.7.1:

Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see  $7 \times 8$  equals the well remembered  $7 \times 5 + 7 \times 3$ , in preparation for learning about the distributive property. In the expression  $x^2 + 9x + 14$ , older students can see the 14 as  $2 \times 7$  and the 9 as  $2 + 7$ . They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see  $5 - 3(x - y)^2$  as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers  $x$  and  $y$ .

**Look for and express regularity in repeated reasoning.**

MAFS.K12.MP.8.1:

Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation  $(y - 2)/(x - 1) = 3$ . Noticing the regularity in the way terms cancel when expanding  $(x - 1)(x + 1)$ ,  $(x - 1)(x^2 + x + 1)$ , and  $(x - 1)(x^3 + x^2 + x + 1)$  might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.

## Reference Sheets:

- Reference sheets will be available as online references (in a pop-up window). A paper version will be available for paper-based tests.
- Reference sheets with conversions will be provided for FSA Mathematics assessments in Grades 4–8 and EOC Mathematics assessments.
- There is no reference sheet for Grade 3.
- For Grades 4, 6, 7, and Geometry, some formulas will be provided on the reference sheet.
- For Grade 5 and Algebra 1, some formulas may be included with the test item if needed to meet the intent of the standard being assessed.
- For Grade 8, no formulas will be provided; however, conversions will be available on a reference sheet.

<b>Grade</b>	<b>Conversions</b>	<b>Some Formulas</b>

See Appendix A for the Practice Test item aligned to this standard.	

Content Standard	<p><b>MAFS.4.MD</b> <i>Measurement and Data</i></p> <p><b>MAFS.4.MD.3</b> <i>Geometric measurement: understand concepts of angle and measure angles.</i></p> <p><b>MAFS.4.MD.3.5</b> Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement.</p> <p><b>MAFS.4.MD.3.5a</b> An angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. An angle that turns through <math>\frac{1}{360}</math> of a circle is called a “one-degree angle,” and can be used to measure angles.</p> <p><b>MAFS.4.MD.3.5b</b> An angle that turns through <math>n</math> one-degree angles is said to have an angle measure of <math>n</math> degrees.</p> <p>Also Assesses:</p> <p><b>MAFS.4.MD.3.6</b> Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.</p>												
Assessment Limits	<p>Items may contain whole number degree measures within <math>0^\circ</math> and <math>360^\circ</math>.          For identification, angles are less than <math>360^\circ</math>.          For construction, angles are less than <math>180^\circ</math>.          Items may not require estimating the exact measures of angles.</p>												
Calculator	No												
Context	Allowable for 4.MD.3.5; no context for 4.MD.3.6.												
Sample Item	Item Type												
<p>Select the category of measure for each angle.</p> <table border="1" data-bbox="220 1325 727 1598"> <thead> <tr> <th></th> <th>Less than <math>90^\circ</math></th> <th>Between <math>90^\circ</math> and <math>180^\circ</math></th> </tr> </thead> <tbody> <tr> <td></td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> <tr> <td></td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> <tr> <td></td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> </tbody> </table>		Less than $90^\circ$	Between $90^\circ$ and $180^\circ$		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>	Matching Item
	Less than $90^\circ$	Between $90^\circ$ and $180^\circ$

See Appendix A for the Practice Test item aligned to this standard.	

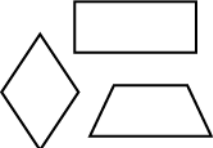

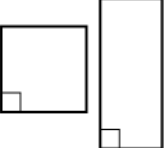

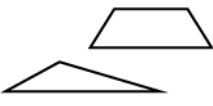

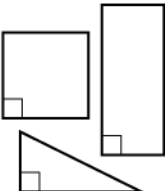

Grade 4 Mathematics Item Specifications  
 Florida Standards Assessments

Content Standard	<p><b>MAFS.4.G</b> Geometry</p> <p><b>MAFS.4.G.1</b> Draw and identify lines and angles, and classify shapes by properties of their lines and angles.</p> <p><b>MAFS.4.G.1.1</b> Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.</p>	
Assessment Limits	<p>Items may not require students to name a given figure.</p> <p>Items may not require knowledge or use of ordered pairs or a defined coordinate grid system.</p> <p>Items may require students to draw a figure based on multiple attributes (e.g., an acute triangle), with the exception of right triangles.</p> <p>Items that include trapezoids must consider both the inclusive and exclusive definitions.</p> <p>Items may not use the term "kite" but may include the figure.</p>	
Calculator	No	
Context	Allowable	
Sample Item		Item Type
<p>Which angle is acute?</p> <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  <p>A.</p> </div> <div style="text-align: center;">  <p>B.</p> </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 20px;"> <div style="text-align: center;">  <p>C.</p> </div> <div style="text-align: center;">  <p>D.</p> </div> </div>		Multiple Choice

Sample Item			Item Type															
Select all the attributes that apply to each set of lines. <table border="1" data-bbox="224 304 690 766"> <tr> <td></td> <td></td> <td></td> </tr> <tr> <td>Contains Parallel Line</td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> <tr> <td>Contains Perpendicular Line</td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> <tr> <td>Contains Acute Angle</td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> <tr> <td>Contains Obtuse Angle</td> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> </table>						Contains Parallel Line	<input type="checkbox"/>	<input type="checkbox"/>	Contains Perpendicular Line	<input type="checkbox"/>	<input type="checkbox"/>	Contains Acute Angle	<input type="checkbox"/>	<input type="checkbox"/>	Contains Obtuse Angle	<input type="checkbox"/>	<input type="checkbox"/>	Matching Item
																		
Contains Parallel Line	<input type="checkbox"/>	<input type="checkbox"/>																
Contains Perpendicular Line	<input type="checkbox"/>	<input type="checkbox"/>																
Contains Acute Angle	<input type="checkbox"/>	<input type="checkbox"/>																
Contains Obtuse Angle	<input type="checkbox"/>	<input type="checkbox"/>																
A. Use the Connect Line tool to draw an acute angle.  B. Use the Connect Line tool to draw an obtuse angle. <div data-bbox="230 945 597 1260">  </div>			GRID															
See Appendix A for the Practice Test item aligned to this standard.																		

Content Standard	<p><b>MAFS.4.G Geometry</b></p> <p><b>MAFS.4.G.1</b> Draw and identify lines and angles, and classify shapes by properties of their lines and angles.</p> <p><b>MAFS.4.G.1.2</b> Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category, and identify right triangles.</p>	
Assessment Limits	<p>Triangles: equilateral, equiangular, isosceles, scalene, acute, right, obtuse.          Quadrilaterals: parallelograms, rectangles, squares, rhombi, trapezoids.          Other polygons may be included where appropriate.          Items that include trapezoids must consider both the inclusive and exclusive definitions.          Items may not use the term "kite" but may include the figure.</p>	
Calculator	No	
Context	No context	
Sample Item	Item Type	
<p>Select all the obtuse triangles.</p> <p><input type="checkbox"/> </p> <p><input type="checkbox"/> </p> <p><input type="checkbox"/> </p> <p><input type="checkbox"/> </p> <p><input type="checkbox"/> </p>	Multiselect	
<p>Which figure is an acute triangle?</p> <p>A. </p> <p>B. </p> <p>C. </p> <p>D. </p>	Multiple Choice	

Sample Item				Item Type
Select all the properties that <b>always</b> belong to each shape.				Matching Item
	Has a right angle	Has perpendicular lines	Has parallel lines	
Right Triangle	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Rhombus	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Rectangle	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
The shapes have been sorted into two groups. <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;"> <p><b>Group 1</b></p>  </div> <div style="text-align: center;"> <p><b>Group 2</b></p>  </div> </div> <p>Explain what two attributes were used to sort the shapes.</p>				Open Response
The shapes have been sorted into two groups. <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;"> <p><b>Group 1</b></p>  </div> <div style="text-align: center;"> <p><b>Group 2</b></p>  </div> </div> <p>Explain what two attributes were used to sort the shapes.</p>				Open Response

## Appendix B: Revisions

Page(s)	Revision	Date
10	Assessment limits revised.	May 2016
11	Assessment limits revised.	May 2016
13	Combined MAFS.4.OA.1b and MAFS.4.OA.1a standards and added sample items.	May 2016
14	Inserted complete standard language for MAFS.4.OA.2.4b, corrected standard language for MAFS.4.OA.2.4a, and sample items revised.	May 2016
17	Sample items revised.	May 2016
18	Context revised.	May 2016
22-23	Assessment limits and sample items revised.	May 2016
24	Assessment limits revised.	May 2016
28	Assessment limits revised.	May 2016
32	Assessment limits revised.	May 2016
34	Assessment limit and sample items revised.	May 2016
35-36	Assessment limits and sample items revised.	May 2016
37-38	Assessment limits revised.	May 2016
41-42	Assessment limits revised.	May 2016
43-44	Assessment limits revised.	May 2016
45	Assessment limits revised.	May 2016
46	Appendix A added to show Practice Test information.	May 2016
3	Technology-enhanced item descriptions revised.	November 2017
5	Mathematical practices description revised.	November 2017
9	References to Algebra 2 deleted.	November 2017
10-45	Item types removed from standards. Refer to the Technology-Enhanced Item Types – Mathematics section on pages 3 and 4 for descriptions.	November 2017
